

Environmentally Responsible Battery Recycling Policy

Tangent supports battery recycling. It's simple and very easy to do.

If you own a Tangent computer you can always recycle your unit's batteries. Recycling them is not just a way to get rid of useless batteries. It is, more importantly, an important way of keeping the environment safe, clean, and sound for the future generations. Here is how you can do your part.

The easiest solution is to drop off your used battery at a recycling plant or at a drop off location of an organization which aims to collect recyclable items such as your Tangent batteries and forwards them to a recycling or refurbishing facility. Drop-off centers are usually the branches of popular supermarket chains, bookstores, computer retail and repair shops, schools, and home furnishings stores. If you aren't sure if there's a drop-off center near your area, search online for some of these national organizations (most of them have websites and toll-free numbers) or ask your local government for help. Once the batteries reach the said state-of-the-art refurbishing facility, reusable materials such as nickel, cadmium and iron are taken and used in the manufacture of stainless steel and even in the production of new batteries. If you are unable to find a suitable drop off center you may instead ship your Tangent notebook battery directly to:

Tangent, Inc
Recycling Department
191 Airport Blvd.
